PDO Absorbable Thread Lift

\$850.00 min.

The PDO Thread Lift is a treatment which lifts and tightens sagging skin tissue, using threads made of Polydioxanone (PDO). The threads introduces them into the deeper layers of the skin. Once introduced, the threads produce 3 effects in the skin: Instant Skin Lifting, Cellular Renewal, through Collagen stimulation, and neovascularization to improve skin texture, fine lines and elasticity, & Skin Tightening, by contracting fat tissue. About 6 months after the procedure, the PDO threads will disappear through simple hydrolysis (they are absorbable). The lifted facial contours will remain for about 3-6 months more, due to the cellular rejuvenation effects. Your skin cells are stimulated to produce new collage.
